
Agfa to highlight IMPAX Cardiovascular IT solutions at EuroPCR

Agfa HealthCare will highlight its comprehensive IMPAX Cardiovascular suite of products at the EuroPCR congress, the official congress of the European Association of Percutaneous Cardiovascular Interventions (EAPCI), from May 21-24, in Paris, France. The focus will be on demonstrating how IMPAX Cardiovascular delivers the benefits of digital cardiology to the cardiologist's fingertips.

Standards-based and vendor-neutral, the IMPAX Cardiovascular suite offers true structured reporting capabilities and clinical decision support, and consolidates each patient's relevant cardiology procedure information. This provides clinicians with a single point of access offering a toolkit that supports a diagnostic workflow, and provides secure, anytime, anywhere management of the patient's record with fast access to cardiology information.

Tools to be highlighted at EuroPCR this year focus on optimising workflow and enhancing ease of use, and provide in-depth procedure-oriented clinical content, while sharing a common platform with the rest of the clinical procedures. They include comprehensive and intuitive structured reporting for diagnostic, PCI and TAVI procedures, multimodality review and analysis, automated Syntax and EuroScore calculation and built-in registry support.

Other specialist features for cardiologists include one-click front-end image-data integration, clinical workflow integration from report elaboration to report distribution, and a unified clinical back-end for research data, completing the consolidation of images and data across the wide range of cardiology sub-specialties.

Please visit booth #M35 for a demonstration or to speak with an Agfa HealthCare product expert.
