iMDsoft Opens New Office In Germany

MDsoft®, a leader in clinical information systems, announced the opening of a new office with an expanded workforce in Düsseldorf, demonstrating their firm commitment to the market. The local team will now include a German-based professional services team providing support 24/7**.**

iMDsoft has seen significant growth in German-speaking countries over the past few years. To date, MetaVision® clinical information systems have been successfully implemented in 22 hospitals in Germany, Austria and Switzerland.

Leading medical centers and university hospitals in the region that benefit from using MetaVision include:

- Berufsgenossenschaftliche Unfallklinik Murnau
- Herz-Zentrum Bad Krozingen
- J.W. Goethe University Hospital
- Salzburger Landeskliniken Universitätsklinikum
- St. Barbara-Klinik Hamm-Heessen
- St. Franziskus-Hospital of Münster
- Universitätsspital Basel
- Universitätsklinikum Regensburg

With a unique architecture that enables efficient software deployments across large regions, MetaVision has become the clinical information system of choice for health networks all over the world. Leading German-speaking health networks that chose MetaVision include Lower Austrian Provincial Clinics Holding and the Vincent Group in Austria.

Designed to accommodate DRG requirements, MetaVision helps hospitals navigate the complexity of DRG documentation and fully realize the associated financial benefits. MetaVision offers high resolution data and advanced decision support across the care continuum ensuring capture of all required data elements.

iMDsoft's recent strategic partnership with ID GmbH & Co. KGaA (Berlin, www.id-berlin.de) provides complete integration between MetaVision and both ID DIACOS® and ID DIACOS PHARMA ®. Through this partnership, hospitals can improve care quality and better support their workflow of DRG coding and eMedication/AMTS through embedded services.

MetaVision automatically creates a complete electronic health record and provides workflow coverage across the entire continuum of care, maintaining a single patient record across ICUs, pre-op units, ORs, recovery units and general floors. Its dynamic patient-centric information repository and advanced decision support options promote the delivery of best practices, protocols, and regulatory requirements. iMDsoft's proven implementation methodology provides for the rapid and efficient deployment of MetaVision, lowering the total cost of ownership and ensuring maximum return on investment.

"Our German-speaking clients have been instrumental in driving our product development, with functionality customized to address local needs. Our investment in the German market and our enhanced local presence reflect our dedication to the region," said David Sides, CEO of iMDsoft. "Increasingly, German health networks are looking for a single system that enforces protocols and standardizes care. We are proud to offer a solution which is proven to achieve these goals and is ideal for multiple sites that work in tandem."
