
Intersurgical TrachSeal® Closed Suction Systems

Intersurgical has introduced a new range of adult 24 hour and 72 hour closed suction systems for ventilated patients. The Intersurgical TrachSeal® range of products addresses the needs of both patients and care providers offering:

- continuous ventilation without loss of PEEP
- a closed system to comply with 'ventilator care bundle' for prevention of VAP
- time and cost efficient practice

TrachSeal® closed suction systems feature highly visible suction valves for added safety. The 72-hour versions are equipped with a unique isolation valve for targeted cleaning and prevention of accidental passage of the catheter into the airway. TrachSeal® is available in adult sizes F12, F14 and F16.
