
ISICEM 2014: Targeted Temperature Management Symposium Organised by BARD

Hot topics in targeted temperature management: Which therapy for which patient?

Evolving clinical evidence, improved device technologies & techniques and a substantial body of clinical experience all challenge us to optimise the protocols, patient selection and treatment algorithms for targeted temperature management in a growing number of patients.

This interactive educational symposium features a review of the latest clinical insights, an update on practice guidelines and a sharing of best practices.

Come and visit BARD at ISICEM 2014, booth 1.15 for further information.
