
ISUOG World Congress 2023

The programme for the 2023 World Congress extends over four days, running from October 16 to 19, featuring a wide variety of events and sessions. It offers the chance to hear from leading experts in ultrasound for obstetrics and gynaecology. ISUOG congress will feature over 45 hours of lectures, live scans, and workshops over our days, with over 130 world-leading experts attending.

The scientific programme features the latest and most current insights, cutting-edge advancements, and research. It will assemble a diverse faculty from across the globe, and will take place in Seoul, introducing top ultrasound experts not only from Korea but also the broader Asian region.

The programme will offer a comprehensive overview of ultrasound in 2023, featuring a range of engaging sessions, including in-depth topic discussions led by field experts. Interactive sessions will provide a blend of debates, lectures, discussions, and scans and images, as well as live scan demonstrations which will be conducted by ISUOG's world-renowned experts.

The congress will feature a variety of plenary lectures which will delve into the latest research and insights on subjects relevant to all members of the community. The exceptional line up of keynote speakers is set to be a standout feature of the 2023 World Congress.

These plenary sessions aim to educate and motivate the community, focusing on the challenges and opportunities within the OBGYN and ultrasound profession.
