
New Canon compact digital radiography system offers unmatched image quality and portability

Weighing just 2.7 kg and measuring approximately 22.5 mm thick, the lightweight and slim-body CXDI-60G offers an effective imaging area of 234 x 284 mm, accommodating a diverse range of applications, including the X-raying of hands, elbows, feet and knees, among the most common orthopaedic examinations. The technology is used in a wide variety of applications including

paediatric intensive care, veterinary radiography, archaeology and forensics.

Inheriting the same compact, lightweight, slim-body merits as its predecessor, the new Canon CXDI-60G delivers unmatched digital image quality and portability, for the flexible establishment of radiographic suites of any size or budget. The model
