
OSI Systems Begins Shipment of ARKON, High Performance Anesthesia Delivery System

ARKON™ - The high-performance anesthesia delivery system by Spacelabs Healthcare offers maximum in functionality, comfort and control. (Image Credit: Spacelabs Healthcare).

OSI Systems, Inc. announced on March 26, 2013 that its Healthcare division, Spacelabs Healthcare, delivered the first orders for its recently introduced high performance anesthesia delivery system, ARKON™.

"ARKON is the culmination of our strong vision of what anesthesia delivery systems should be, supported by years of research and interviews with clinicians from across the globe," commented Deepak Chopra, OSI Systems CEO. "It represents a major step forward for the organization and I am proud to announce that we have delivered our first orders of ARKON in the US. These revolutionary systems will soon be seen in significant hospital groups around the world."

ARKON puts the patient front and center — by offering clinicians optimal functionality, comfort and control — through a combination of innovative technology and ergonomics not previously available in the perioperative environment. ARKON uses advanced concepts in industrial design to improve operating room workflow and adds novel features such as an expanding work surface to enable the clinician to get closer to the patient along with signature lighting to highlight controls that are in an active state.
