
Sectra DoseTrack™ Gains FDA Registration

Sectra has recently registered its radiation dose solution Sectra DoseTrack™, with the FDA. Sectra DoseTrack is a web-based solution which monitors patient radiation doses and ensures that they are kept as low as reasonably achievable. The system automatically collects, stores and monitors data from all connected modalities saving valuable time and enabling analysis. This allows for easy tracking and comparison of radiation levels on modality, examination or patient level. Sectra DoseTrack supports the IHE radiation exposure monitoring profile, DICOM MPPS, DICOM Radiation Dose Structured Report, Optical Character Recognition, and manual input. This allows for the connection of any modality to gain a complete enterprise-wide dose monitoring solution.
